
MSc Psychology: Clinical Neuropsychology

Clinical neuropsychology focuses on how brain disorders and other clinical conditions of the brain affect behavior, cognition and emotion. These disorders and conditions include acquired or congenital neurological and neuropsychiatric conditions in children, adolescents and adults, such as ADHD, autism, stroke, brain tumours, traumatic brain injury, epilepsy, Alzheimer's disease, Parkinson's disease, multiple sclerosis, drug abuse, schizophrenia, bipolar disorder, depression, etc.

Clinical neuropsychologists can be involved in both the assessment and treatment of people with brain disorders in various applied and/or clinical settings, but also in patient related research. Methods used in the field of clinical neuropsychology include neuropsychological testing, neuroimaging and electrophysiological techniques. With the ageing population, the number of people with neuropsychological disorders is rising and this is fuelling the demand for well trained clinical neuropsychologists.

In addition, students are required to complete an internship. A research internship may be undertaken within the same research group or at an external institution. A clinical internship can be completed at a host institution in a native-speaking country.

Application deadline

February: 1 October

September: 1 March

Note for non-EU/EER students:
We strongly advise you to apply well before this deadline (more than 1 month) to allow enough time for visit arrangements or visa renewal.

Tuition fees (2027-2028)

EU/EEA: €2,771
Non EU/EEA: €22,800

Duration

1 year

Entry requirements

www.rug.nl/masters/clinical-neuropsychology
